

Calocurb Amarasate® is now on Fullscript

Calocurb is a natural appetite-management supplement containing Amarasate®, an extract of New Zealand hops that's been clinically demonstrated to reduce hunger by 30%, cravings by 40%, and calorie intake by 18% in just one hour.

Calocurb's mode of action:

1. Amarasate® is released into the small intestine from a delayed-release capsule.
2. Amarasate® stimulates the bitter-taste-sensing type 2 receptors (TAS2Rs) on enteroendocrine cells to release gastric hormones (glucagon-like peptide 1 (GLP-1) and cholecystinin (CCK)) by six times base levels.
3. These gastric hormones signal the brain to help decrease appetite and food cravings and slow down the gastric-emptying rate.

What's GLP-1?

GLP-1 is a natural hormone produced by the body when we eat to tell us we're full. Calocurb super-stimulates the release of this natural hormone before we eat, reducing appetite and calorie intake. The feeling of fullness lasts for about four to six hours.

Amarasate® may help:

- Reduce caloric intake*
- Reduce overall hunger*
- Reduce overall food cravings*
- Support a feeling of fullness*

Calocurb Amarasate® 5-day protocol for appetite support
