

Introducing the Fullscript patient mobile app

Now your patients can access their supplement plans on-the-go

We've got great news: **Fullscript has launched an iOS mobile app** making it easier for your patients to get the supplements you recommend anywhere, anytime.

The Fullscript mobile app makes it quick and easy to stay on track

Downloading the Fullscript mobile app will make it even more convenient for your patients to stick with their recommended supplement plans. They can place orders and manage refills without missing a beat!

Approx.
60%

Over 60% of patients access Fullscript on a mobile device.

Wellness in their pocket

The Fullscript mobile app provides your patients with an even better mobile ordering experience. They can:

- Access **all the details in their recommended supplement plans**, including your messages, products, and attachments.
- Filter your catalog by supplement brand, type, or your favorites to **find the products they need, fast.**
- **Quickly schedule and manage refills, on-the-go.**

Refills on-the-go with Autoship

Patients can stay on track with recurring orders by adding products to Autoship right from the app! They can make whatever changes they need — such as **skipping, pausing, or canceling an order** — up until 24 hours before the Autoship date. So patients can be assured that they will never run out of the supplements that support their health.

Spread the word!

The Fullscript mobile app is now available on iOS devices in the US App Store. Be sure to let your patients know they can download it and enjoy the convenience of having their favorite supplements available in the palm of their hand.

Note: The Fullscript mobile app is available for iOS only. Any patient in the US with an iOS device can download the app, but only those who already have a Fullscript account can sign in.

Still have questions?
